

# MISSION CONTROL

SpaceX maintains launch sites at Cape Canaveral Air Force Station (CCAFS), Kennedy Space Center in Florida, Vandenberg Air Force Base (VAFB) in California, and Boca Chica, Texas. Each location offers key benefits to support the customers' missions.

The southeast coast of the US provides access to a wide range of low and medium inclination orbits frequently used by supply missions to the ISS. Also allows access to geostationary orbits, as well as departures to the Moon and interplanetary destinations.

The site's location on the California coastline provides customers with access to high inclination and polar orbits, frequently used by satellite communication, defense intelligence and Earth-observing satellites, and some lunar missions.
